Code cell

This is an example of a simple code cell.

```
2+2
```

```
## [1] 4
```

R allows you to make more complicated expressions. You can also mute the input of the cell by adding the flag 'echo = FALSE' into the constructor of the code cell.

```
sqrt(16) # this is the square root of 16
```

```
## [1] 4
```

Functions

```
my.adder <- function(x, add.this = 1) {  
  result <- x + add.this  
  return(result)  
}
```

```
my.adder(5,10)
```

```
## [1] 15
```

Tex-Code

$$\sum_{i=0}^N i^2$$
